

certoplast 5900

Structure

High quality mushroom-head formed velcro® strips in combination with a special synthetic rubber-based adhesive.

Properties

- high adhesive force
- free of critical substances
- high initial tack
- protected by the utility model

The self-adhesive mushroom-head velcro® strips are designed for a permanent fixing of velours-wrapped cable harnesses etc. to car body parts. The adhesive is coated in the centre of the material. This allows for a greater area of contact and connecting strength between the velours-wrapped cable harness and the velcro® strip.

The amount and size of the mushroom-heads are specially designed for the velours tape certoplast 595, for the best possible fixation.

Colour

- black

Technical data

	value	dimension
backing	PP / PET – compound	
adhesive	synthetic rubber-based	
adhesion to steel	≥ 4,0	N/cm
temperature range (when applied)	-40 / +90°C	°C
Thickness	1,3 – 1,6	mm

Form of supply

	value	dimension
width *	12 ± 1	mm
length *	35 ± 2%	m

* other sizes upon request

Recommendations for use

Fix the strips to the desired surface immediately after removing the protection cover. The best results are obtained at a working temperature between 20 and 24°C.

Remark: The surface to which the strip is to be fixed must be free of oil or other contaminants such as powder, dirt or release agents. The adhesive power can be affected if the substrates contain softeners.

These details are to the best of our knowledge, nevertheless without guarantee. The suitability for special applications should first be tested by the user. The given values are statistical averages.
